2.3	list-env . . . . .	4
2.4	set-env . . . . .	4
2.5	dump-help . . . . .	5

## INSTALLATION

To install the render-cli package, run this command in your terminal

```
$ pip install render-cli
```

## USAGE

render-cli usage looks like:

Usage: cli [OPTIONS] COMMAND [ARGS]...

A cli to manage your Render services.

### Options:

<b>--version</b>	Show the version and exit.
<b>--help</b>	Show this message and exit.

### Commands:

- dump-help Command to dump all help screen.
- find-service Finds a Render service by name.
- list Returns a list of all services associated with your Render account.
- list-env Fetches list of environment variables of a service.
- set-env Will set environment variables for the specified service.

## 2.1 list

Usage: cli list [OPTIONS]

Returns a list of all services associated with your Render account.

Args: verbose: option to return a formatted json dump of all services instead of the default table view which just displays the service name, service id and service url.

### Options:

<b>-v, --verbose</b>	Display full json output from render api call.
<b>--help</b>	Show this message and exit.

## 2.2 find-service

Usage: cli find-service [OPTIONS]

Finds a Render service by name.

Returns information about service if found.

Args: service\_name: name of service to search for.

**Options:**

**-sn, --service-name TEXT** Find service by name  
**--help** Show this message and exit.

## 2.3 list-env

Usage: cli list-env [OPTIONS]

Fetches list of environment variables of a service.

Returns and lists the environment variables associated with the passed in service id or service name. Verbose mode will display json.

Args: service\_id: id of service whose environment variables to find. service\_name: name of service whose environment variables to find. verbose: option to return a formatted json dump of all environment variable information.

**Options:**

**-sid, --service-id TEXT** Render service id  
**-sn, --service-name TEXT** Render service name  
**-v, --verbose** Display full json output from render api call.  
**--help** Show this message and exit.

## 2.4 set-env

Usage: cli set-env [OPTIONS]

Will set environment variables for the specified service.

Args: file: path to file containing the environment variables to set.

**Options:**

**-f, --file TEXT** File to load env vars from  
**-u, --update** update env vars with those in file rather completely overwrite  
**--help** Show this message and exit.

## 2.5 dump-help

Usage: cli dump-help [OPTIONS]

Command to dump all help screen.

**Options:**

**--help**                      Show this message and exit.
